

Would you benefit from a Free IT & Network Audit?

The world is rapidly changing and so is the way we work.

The way we work has changed with hybrid working and the huge growth of Microsoft Teams, but what does the future look like? Moving your data and applications from a locally stored version to the cloud, and the imminent ISDN/PSTN switch off seem to be on everyone's minds. Cyber criminals are able to hack into a network and hold respected companies to ransom for their own data.

Here are some of the questions our customers are asking:

- Is my network able to accommodate all the additional bandwidth needed for video calls and meeting collaboration?
- How can we leverage technologies such as Microsoft Azure and AWS?
- Could my remote workers be open to a cyber-attack?
- Are we getting the best out of Microsoft Teams and your Microsoft licenses?
- How does the PSTN/ISDN switch off affect me?

So how can we help?

Avoira can support you with a range of technology services including consulting, design, implementation, and support. We have specialist skills in Unified Communications, IT Services and Cyber Security. We can provide a fully managed IT Department or scale it down to bolt-on services to complement your IT Team which include broadband connections, designing and installation network implementation of LAN and WiFi. We have worked with a range of customers to help them transition their PSTN base telephony platforms over to IP based systems.

Avoira are offering our customers a Free IT and Network Audit.

The audit will be conducted over a mix of on-site and video conferencing. It will be undertaken by one of our technical specialists who will write a detailed survey report which will include an overview of current infrastructure and offer any advice where needed.

What is covered?

- ✓ Current IT System & Servers
- ✓ WiFi and LAN (Full Coverage)
- ✓ Email & Communication Platforms
- ✓ Business Continuity
- ✓ Security & Cyber
- ✓ Microsoft Teams
- ✓ Connectivity
