

Real-Time Asset & Staff Locator

Enhancing Efficiency
& Patient Safety

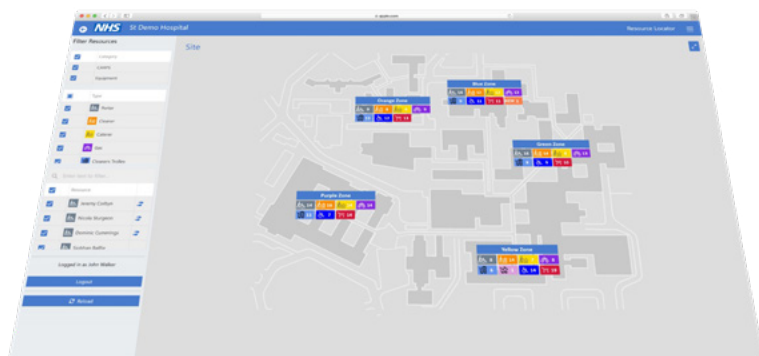

In healthcare, both your staff and essential equipment are critical to delivering high-quality care and ensuring patient safety. Imagine knowing exactly where they are and getting them where they need to be, precisely when they're needed.

Locator gives you the power to:

- Improve decision-making with real-time location data
- Automate status updates for staff and assets
- Reduce response times and enhance service delivery

Enhance your operations with real-time visibility into staff and asset locations as they move across your facility. Whether it's tracking vital equipment like wheelchairs and medical trolleys or ensuring staff are in the right place at the right time, Locator saves hours of time and removes unnecessary stress from your team.

Locator's Interactive Site Map provides an intuitive visualisation of your site, showing critical assets and personnel at a glance. Available as a stand-alone solution or integrated with our CARPS task management system, Locator seamlessly scales to fit your needs.

With Locator, You Can:

- Minimize response times by quickly locating nearby staff and assets
- Verify attendance and arrival times for tasks
- Optimize task allocation through automatic, real-time updates
- Receive instant alerts when assets move outside designated areas
- Track asset movement history for comprehensive reporting
- Easily scale to track additional asset types as your needs grow

Asset Tracking

When critical equipment like wheelchairs or trolleys go missing, response times suffer. Locator streamlines operations by notifying staff of the precise location of essential, tagged assets, cutting down on search times and improving the patient experience.

Real-time asset tracking across multiple floors and areas

- Interactive map filtering for quick access to specific asset types
- Movement history reports to review and analyse asset usage
- With Locator, your staff can focus on delivering the best patient care, knowing that the right people and tools are always in the right place, at the right time.

Operative Tracking

Smart devices or radios are tracked in real time, zone by zone, and floor by floor using beacon technology. Locator automatically updates the location of mobile staff, ensuring tasks are assigned to the closest, most available team members, without needing manual status updates.

Accurate staff location tracking from room to room

Automated status updates when staff begin tasks

Faster response times by assigning tasks to those best positioned to respond
