Large Meeting Rooms

Enhance your space with Yealink

Optimising Large Meeting Rooms with Yealink S90

As meeting spaces grow in size, achieving effective communication and meeting equity becomes more complex. Large conference rooms require advanced AV technology that ensures all participants—whether in the room or remote—are clearly seen and heard. The Yealink S90 is purpose-built for these environments, offering an integrated, high-performance video conferencing solution that meets the demands of modern large meeting spaces.

Advanced Video Capabilities with Yealink S90

In large rooms, a single camera often can't provide full coverage or capture dynamic participant interactions. The Yealink S90, an AI-powered multi-camera solution, addresses this challenge by offering a modular setup that includes multiple 4K cameras with auto-framing, speaker tracking, and intelligent scene switching. This allows the system to seamlessly follow speakers, switch perspectives, and frame group discussions in real time.
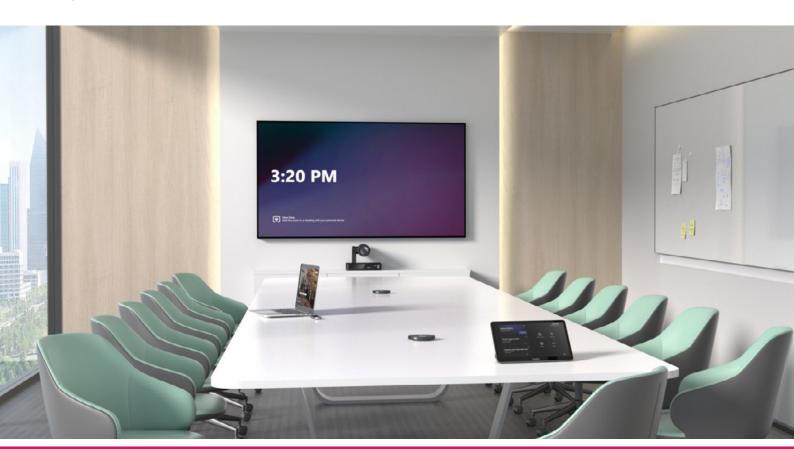

The S90 system supports flexible camera placement, ensuring optimal visibility across wide seating arrangements or unconventional room layouts. Whether it's a formal boardroom or a collaborative training space, the S90 delivers broadcast-level video experiences that enhance engagement and clarity for all attendees.

With native integration for Microsoft Teams Rooms, the S90 ensures a smooth and intuitive user experience, while supporting additional features like content camera integration for whiteboards or shared visuals—ideal for interactive discussions and presentations.

Intelligent Audio and Seamless Integration

The Yealink S90 doesn't just excel in video; it also supports superior audio pickup through seamless integration with Yealink's ceiling microphones and speaker systems. By leveraging technologies like beamforming, noise cancellation, and full-duplex communication, the system captures voices accurately—regardless of where participants are seated.

Paired with Yealink's SkySound audio solutions, including the SkySound CS10 ceiling speaker, the S90 delivers an immersive, high-fidelity audio experience. The CS10 is specifically engineered for voice clarity in large meeting environments, ensuring even sound distribution and eliminating audio dead zones. This complete AV ecosystem guarantees that speech is not only captured cleanly but also delivered with exceptional clarity and presence, creating a more natural and engaging meeting environment for everyone—remote or in-room.

Avoira's Expertise in Installation, Consultancy, and Support

At Avoira, we specialise in creating tailored AV solutions that match your room's design, purpose, and workflow. Our team ensures the Yealink S90 is deployed in a way that maximises its capabilities—whether you need a dual-camera setup, ceiling microphones, digital signage integration, or additional control panels.

From the first consultation through installation and training, Avoira manages every step. We handle network integration, room optimisation, and system configuration to ensure your technology works flawlessly from day one.

Beyond installation, our managed services include remote monitoring, proactive troubleshooting, and firmware updates to keep your meeting spaces running smoothly and efficiently—minimising downtime and ensuring reliable performance for every meeting.

A Scalable and Future-Proof Solution

The Yealink S90 is built to scale. Whether you're outfitting a large boardroom or a multi-purpose event space, its modular design and intelligent features adapt to your needs. As hybrid collaboration becomes the norm, the S90 delivers a consistent, high-quality experience that bridges the gap between in-person and remote participants.

When paired with Avoira's strategic consulting and expert support, the Yealink S90 becomes more than just a piece of technology—it becomes the foundation for better communication and collaboration across your organisation.
