Optimising Medium Meeting Rooms with Yealink MeetingBar A40 and SkySound CS10

Medium-sized meeting rooms demand solutions that are powerful yet simple, delivering exceptional audio and video performance without the complexity of large systems. The Yealink MeetingBar A40, paired with the SkySound CS10 ceiling speaker, provides a robust, all-in-one solution purpose-built for these spaces—ideal for Microsoft Teams Rooms and other major video conferencing platforms.

This combination ensures that meetings are more productive, more immersive, and more inclusive for both in-room and remote participants.

Smart Video Coverage for Medium Spaces

In medium rooms, visibility and intelligent framing are essential. The Yealink MeetingBar A40 features dual 48MP cameras that use advanced AI to automatically adjust views through auto-framing and speaker tracking. Whether people are seated at a table or moving around the room, the system intelligently focuses on whoever is speaking.

With a 133-degree wide-angle field of view, the A40 ensures complete room coverage, reducing blind spots and improving engagement for remote attendees. This intelligent video approach eliminates the need for manual camera adjustments and creates a natural, in-person-like meeting experience.

Enhanced Audio with SkySound CS10

While the A40 includes an integrated 8-microphone beamforming array for precise voice pickup and noise suppression, pairing it with the SkySound CS10 ceiling speaker significantly elevates the overall audio experience.

The CS10 is a purpose-built, two-way coaxial speaker designed specifically for conferencing environments. It is tuned for speech clarity, delivering crisp, room-filling sound that ensures everyone can hear—and be heard—clearly. With Power over Ethernet (PoE) and a built-in Digital-to-Analog Converter (DAC), installation is streamlined with fewer cables and components required.

Its magnetic grille is paintable and low-profile, making it blend discreetly into any ceiling design—ideal for businesses that value clean aesthetics alongside powerful functionality.

Avoira's Expertise in Medium Room Deployment

At Avoira, we deliver end-to-end AV solutions that align with your business needs. From design and installation to configuration and training, we ensure your Yealink A40 and SkySound CS10 are seamlessly integrated.

Our managed services include remote monitoring, diagnostics, and updates—keeping your systems reliable, user-friendly, and future-ready, while reducing the burden on your IT team. We make collaboration simple, scalable, and effective.

Ready for the Future of Hybrid Collaboration

As organisations adopt hybrid work models, the importance of medium-sized meeting rooms grows. These rooms often serve as central hubs for cross-functional meetings, client calls, and hybrid brainstorming sessions.

The Yealink A40, with its plug-and-play simplicity and powerful performance, paired with the SkySound CS10, delivers a scalable and professional solution that adapts to changing workplace needs. Together, they ensure high-quality collaboration experiences for every user—without the learning curve or technical complications.

By choosing Avoira as your technology partner, you gain more than cutting-edge tools—you gain expert guidance, reliable support, and peace of mind that your meeting rooms are built for now and ready for what's next.
