Detect, isolate and report

RansomCare by
BULLWALL

There were
200 Million
ransomware attacks
in the last 6 months of 2020

Nearly
25
attacks per second

RansomCare is engineered to:

RC

Monitor and Detect

Isolate and Quarantine

Recover and Report

RansomCare benefits & features

✓ **A different approach**

Instead of searching for ransomware, RansomCare detects and responds to ransomware's malicious intent: illegitimate file encryption.

✓ **Agentless solution**

RansomCare is not installed on endpoints or existing servers, it is easily deployed within days and leverages Machine Learning to configure automatically.

✓ **Detects the unknown**

Cybercriminal development teams are constantly monitoring known and unknown ransomware variants, so they know when to change their methods.
✓ **Utilise the cloud**

RansomCare works seamlessly with Office 365, Sharepoint and Google Drive and has the ability to access the cloud including mobile devices, MAC, laptops and more.

✓ **Cover all entry points**

RansomCare reacts immediately to said device when it is being targeted, whether that be a mobile phone, via email, USB cable and more.

✓ **Complementary**

RansomCare is not a replacement, but a complementary last line of defense security layer.

✓ Agentless solution requiring nothing to install on endpoints.

✓ Protects all critical IT infrastructure on-prem and cloud with 24×7 automated containment.

✓ Automated compliance reporting for standards such as GDPR and NIST.
